

Carbon Reduction Plan

Supplier name: Victim Support

Publication date: 17th March 2022

Commitment to achieving Net Zero

Victim Support is committed to achieving Net Zero emissions by 2050.

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2021	
Additional Details relating to the Baseline Emissions calculations.	
<i>This is our first measurement year which means there is no prior data to compare against and our Current Year measurement is the same as our Baseline.</i>	
Baseline year emissions:	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	35.170
Scope 2	40.263
Scope 3 (Included Sources)	130.651
Total Emissions	206.085

The base year emissions reported have been impacted by the changes in operation brought on by COVID19. The full impact of this on our emissions will become more evident as the organisation is able to operate more normally over the coming months and years.

Current Emissions Reporting

Reporting Year: 2021	
EMISSIONS	TOTAL (tCO₂e)
Scope 1	35.170
Scope 2	40.263
Scope 3 (Included Sources)	130.651
Total Emissions	206.085

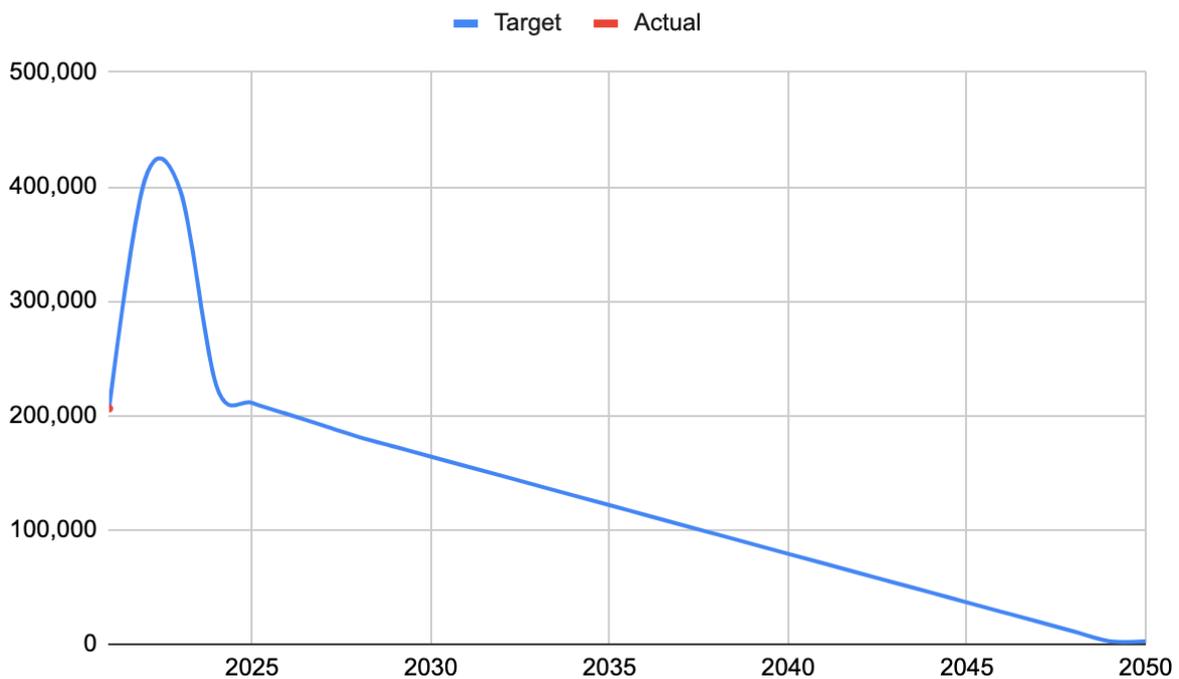

Emissions reduction targets

Activity	Target Date	tCO ₂ e Reduction
Increase the use of rail, bus and tube as a primary travel options from 47% (in 2021) to 60%	2023	9.991 tCO ₂ e
Move all electricity supplies to 100% renewable sources	2024	40.263 tCO ₂ e
Promote the use of EVs, walking and using public transport to all employees, continue to increase the hybrid working models to reduce commuting by 10% and consider a cycle-to-work scheme.	2025	1.525 tCO ₂ e
Update our new building considerations document to include environmental factors and where possible, seek to achieve 'excellent' or 'very good' BREEAM certification or equivalent alternative environmental standard with specific focus on the reduction of the use of natural resources and waste sent to landfill	2026	10.204 tCO ₂ e

In order to continue our progress to achieving Net Zero, we have adopted the following carbon reduction targets.

We project that carbon emissions will marginally decrease over the next five years to 191 tCO₂e by 2027. This is a reduction of 7%. This reduction does however include the initial increase in emissions as the organisation, and the rest of the world, returns to a working structure that is more in line with pre-COVID activity. In real terms we would be reporting emissions reductions over this same period of approximately 50% had the base year not been impacted by COVID. Progress against these targets can be seen in the graph below:

Carbon Reduction Projected Vs Actual

Carbon Reduction Projects

Completed Carbon Reduction Initiatives

The following environmental management measures and projects have been completed or implemented since the 2021 baseline. The carbon emission reduction achieved by these schemes equate to 0 tCO₂e, a 0%ge reduction against the 2021 baseline and the measures will be in effect when performing the contract

- Appoint Positive Planet as our sustainability partner

In the future we hope to implement further measures such as:

- Commit to regular review and seek out acceleration of initiatives, wherever possible
- Through a Responsible Procurement' and Commissioning Campaign (RPCC), by increasing the weighting in formal evaluations to further encourage supply chain commitment to sustainability. The RPCC will include reducing the quantity, volume and range of goods purchased, increase contractor and industry collaboration, and raise spend with diverse, local enterprises
- Engage core team members in Carbon Literacy Training

Declaration and Sign Off

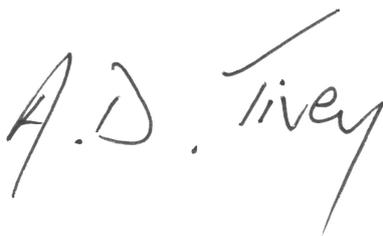

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate Government emission conversion factors for greenhouse Gas Company reporting².

Scope 1 and Scope 2 emissions have been reported in accordance with SECR requirements, and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard³.

This Carbon Reduction Plan has been reviewed and signed off by the board of directors (or equivalent management body).

Signed on behalf of the Supplier:

A handwritten signature in black ink that reads "A.D. Tivey". The signature is written in a cursive style with a large, sweeping flourish at the end of the name.

Andrew Tivey
